

Front End Developer

Stellar seeks a Front End Developer who will be excited to work on transformational web experiences for some of the world's top brands. You will be working in cross-functional teams alongside designers, user experience designers, strategists, and other engineers to create innovative solutions and bring ideas to life in code. Front-End Developers/Engineers at Stellar are part of highly creative and technically innovative development teams responsible for building sites and applications for our clients, participating in hands-on application development efforts for various web-based business applications.

The Role

- Architect, develop and deploy websites, mobile applications, emails and social
- Translate design comps into HTML5/CSS3+ pages
- Solve business issues by identifying and analyzing detailed requirements to reflect clients' needs that translate into system designs
- Resolve issues and remove project barriers for clients and internal teams
- Mentor other engineers in application development and best practices
- Facilitate team meetings and project manage when needed

The Top Things We're Looking For

- Strong experience with Adobe Creative Suite, HTML5/CSS3+, JavaScript, AJAX, and Content Management Systems.
- Has experience using JS Frameworks (React, Angular, Backbone, Ember, JQuery, etc...)
- Has extensive knowledge of modern CSS practices for responsive web design and is comfortable working with CSS processors such as SASS or LESS
- Is comfortable using build and package management solutions such as Gulp, Grunt, WebPack, and npm
- Knowledge of .NET, Java, PHP and other web development platforms is a plus.
- Is proficient in using Git code repositories, and understands processes and practices for branching, pull requests, merging, etc.
- Has a solid understanding of cross-browser/platform issues and code solutions
- Has a passion for front end development, and keeps up with the latest updates, releases, and trends across the field. Enjoys being part of the web development community.
- Understands RESTful API best practices and managing asynchronous data
- Is comfortable working with remote team members, and collaborating with English-speaking team members
- Is familiar with Photoshop and/or Sketch to review designs and export assets, etc.
- Has excellent debugging and problem solving skill
- Understands server-side scripting (Node.js, PHP, .Net, Java, Python, etc.). Bonus if you have any hands-on experience writing server-side code or working with databases.
- Self-motivated, organized and accountable
- Humble in victory, constructive in defeat

- Willing to fight for good ideas, but always a team player
- Self-starter, driven, focused, eager
- Bachelor's Degree or equivalent work experience in digital and marketing
